The week just ended is the more interesting as it included the close of the month of October. The Bullion shipments for that month amounted to \$454,557.07, which, considering the limited means of reduction afforded by the mills is a splendid proof of the productiveness of the Pioche mines. The month of November will show a considerable increase on this amount, as the Meadow Valley does not finish its monthly run until the fourth. It must also be recollected that the same Company did not commence crushing until the 15th of October. Now the Dry Valley mill is working up to its full capacity, and the effects of its work will leave a very sensible effect on shipments. The developments can only leave one impression, and that is that the more the mines of Pioche are explored and tested the more convincing proof do they afford of their great value and assured

permanence. The bullion shipments for the week are smaller than usual-\$87,458,29,

SILVER PEAK.-This mine is located about 2 miles south of Proche and about 100 yards from the Builionville railroad in a westerly direction. An incline has been sunk on this ledge, which runs S. E., and N. W., to a depth of 120 feet, showing a well developed vein averaging 5 feet in width. At the 90-foot level two drifts have been run, the north drift being in 30 feet, and the south 75 feet. At this depth stoping has been commenced, but the body of ore is so large, being from 6 to 61/4 feet in width, that it has been found impossible to hoist the ore at a sufficiently rapid rate to keep the mine clear. Machinery is greatly needed to do this work. In the 120 foot level the ledge shows as large and is of the same grade of ore as the above, On this level a veju has been run north 16 feet in length for the purpose of prospecting and looks very satisfactory Mr. W. K. Miller, the foreman, is conducting the development of this gine in a thorough and workscaulike fashion. The lack of hoisting works and scarcity of teams to haul the rock to the Conder mill serve to keep the mine from making the progress it otherwise would, but we understand that in a short time this will be remedied.

CONDOR MILL. - Is situated 3 miles from Bullionville, between that place and Dry Valley. It is a romantic and pleas-ant spot for this land of sagebrush, as is plenty of running water and shady trees surrounded by an amphi-theatre of lofty rocks. The mill is built on quite a novel plan, there being no stamps used, only the patent crushing machines. The ore is received in the upper portion of the mili and passes through the Brody crusher, from thence through the rollers and is amalgamated in six Hebron Eoller pans. The arrange ment is very ingenious and labor saving and seems to be very successful. The machinery is driven by a powerful engine the cylinder of which is 14x30. Steam is supplied by a very large boiler 54 inches in diameter containing 62 three inch tubes. Complete arrangements have been perfected to guard against fire, a donkey engine capable of throwing 7000 gallons in an hour with 150 feet of 2-in h hose being kept in constant read-iness for use. Mr. S. M. McCurdy is Superintendent of the mill and his efforts to keep matters in good shape are well seconded by those who are working ander his charge. Messis Colyer and McWilliams are the amalgamators. An assay office is attached to the mill which is well arrayed and is under the charge of Mr. James Buchanan, A boarding house is being erected but, is not quite finished, owing to the great difficulty in obtaining lumber. We forgot to say that the mill was erected by Mr. W. J. Drew and reflects much credit upon the mechanical abilities of that gentleman. conclusion Messrs, McCurdy, McWil isms and Mr. and Mrs. Buchanan will receive our sincere thanks for the courtesies with which they favored us during

our visit. Excension.-This mine still keeps up its reputation of being one of the very best and most profitable in this district. Last Friday some of the finest ore that has ever been taken out presented itself, and in no inconsiderable quantity. The ledge in many places is four feet wide. In the winze, which is now 80 feet below the 200 feet level, some extremely fine ore has been discovered. The new working shaft is down 100 feet. It is not expected to strike the ledge at a less depth than 300-foot. The five stamp mid at Bullionville is working steadily on ore from this mine, and is making excellent returns Last week, bullion to the amount of \$5,000 was shipped, and an-other shipment will be made on the 5th The bullion is very fine, marking 935.

FLORAL MILL. - During the past week considerable progress has been made in this undertaing. The frame of the building is being raised, and will be rapidly pressed to completion, for the purpose of securing cover to carry on the erection of the int rior works. All the stone foundations and walls, with the grading, have been completed. The machinery will probably arrive to-day, as on Saturday it was only 15 miles from Pioche. The work will be pushed to purpose of securing cover to carry on the Pioche. The work will be pushed to completion with unremitting vigor, and is anxiously looked for by the mining interests, for its services are much needed for custom work, of which there is an immense quantity always to be had.

PIOCHE PHENIX.—During the past week work on the new shaft was suspended for two days, as it was necessary to cover the shaft with timbers to raise the gallows frame. On Thursday work was resumed on the shaft, which is now down 130 feet with some improvement in the rock, it being much softer than heretofore. A portion of the hoisting machinery has arrived and the rost is ex-pected daily. In the old works there are no new developments. The work is pro-gressing and things generally are looking

very favorable. SURBRAM.—The new hoisting machinery works most satisfactorily and commenced raising ore last Saturday evening. There are now 100 tons on the dump of first class ore. The working shaft has attained a depth of 200 feet. A drift has opened from the shaft to the ledge a distance of 80 feet, from thence a winze was sunk on the ledge to a depth eremely well. It is proposed to extend the winze 50 feet deeper, then sink on the main shaft to a corresponding depth and connect the two.

CAROLINE,-This is an old location. having been taken up in 1868 by Mr. John Atchinson. The indications being extremely good on the surface, considerable work was done, showing a 4 foot ledge, from which assays have been taken that have given an average of \$120 per ton. The prospect being good it was desired to incorporate, and Capt. Hardy, an expert in mining and the superintendent of some of our prominent mines, was solicited to lend his assistance, to which be consented and formed an inwhich he consented and formed an in-corporated company in San Francisco, with a paid up working capital of \$12,-000. After completing these necessary preliminaries, Capt. Hardy has gone to work in right good earnest and has let a contract to sink a shaft 100 feet. The mine is situated in Part 100 feet. mine is situate in Panaca Flat, about 300 feet S. E. from the Lightner shaft, From its position and the prospects al-ready obtained there is every reason to believe that it will be a most successful enterprise.

MEADOW VALLEY. - The yield of bullion from this mine for October will be fully \$115,000. It is confid-ntly expected that the product of the present month will fully reach, if it does not exceed \$150,000. The production of ore for the past month was nearly 1,200 tons, notwithstanding the drawbacks in altercomplement of men is now steadily employed in No's. 3 and 7, and the product of cre for this month will not fall short of 1,800 tons. The condition of the mine justifies the most sanguine expectations of the continued reserved. pectations of the continued payment of dividends in the future. In shaft No. 3 the workings are being most vigorously prosecuted, and the results past and prospective are most encouraging. In No. 7 work has been resumed in the west-erly drift on the 4th level, and in a few days sinking will be commenced on the same incline which is now 740 feet in

RAYMOND AND ELY .- The shipments of bull on from this mine for the month of October reach the immense sum of \$342,-000. This will be most gratifying news to the shareholders of this magnificent mining property, and also to the citizens of Pioche, the prosperity of whom depends so entirely upon the continued productiveness of the mines. The condition of the mine is itself unchanged from our last report, and the product of ore and bullion continue at the same rate as heretofore.

MAZEPPA. - The shaft is now 90 feet in depth and has cut several streaks of fine ore. The ledge is at present somewhat broken and not very well defined, but from the increasing number of strata of rich ore that are frequently exposed, it is believed that the vein will shortly be opened where it is settled and well defined. Assays have been made from the streaks referred to which give results as high as \$380 per ton. The machinery for the hoisting works has been ordered and will shortly be on the way hither.

IVANHOE.—The new holating works for this mine are expected to arrive in a few days. The working shaft is down 220 feet. The ledge at the bottom is two feet wide showing a high grade of soft decomposed ore. The old shaft is 320 feet deep, and the ledge in that portion of the mine is fully three feet in width. From all that we can learn we think the Ivanhoe will soon take position among our prominent mines.

Manton.-The drift on the line of the ledge is now 100 feet in length. The ledge shows all the way and has im-proved from the start. In the face of the drift it now looks very well, revealing a good strong ledge, from which assays have been made giving large figures. The prospects of this mine must now be considered as quite encouraging.

CHIEF EAST EXTENSION. - Operations this mine are proceeding quite vigerously. Three shifts of men are employed under the careful supervision of Mr. Hardy, the Superintendent, and Mr. R. Wright, the Foreman. The winze being sunk in the 90-foot level is 40 feet in depth. The ledge is about the same in appearance as when last reported on, and in all respects shows well, with clearly defined walls.

Page and Panaca.—In the 360-foot level, which is in 183 feet, the face shows sulphurets of iron and the indications are considered good for speedily cutting a vein of ore. The shaft has reached a depth of 463 feet. The ledge near the bottom is from 2 to 3 feet in width and carries some ore from which fair assays have been had.

Atrs.-The shaft is now 194 feet deep. At this point a station has been opened and a drift will be commenced on Monday. It is expected to reach the ledge in about 30 days. The work of explor-ing this mine is going along very steadily under the careful superintendence of Mr. Dayton. The hoisting machinery works extremely well and smoothly.

Procue.-During the past week, sinking has been commenced on the ledge below the fifth level. In other respects the mine presents the same appearance as described in our last report. Ore is being shipped to the Magnet mills, which are steadily engaged in reducing it. Mr. Nelson, the Superintendent, is exerting himself greatly in developing the mine with a due regard to economy and

HUHN AND HUNT.-Mr. T. R. Butler, Assayer, got ready for shipment seven bars belonging to this company, valued at \$8,269.63. This speaks well for the mine. The bullion is very fine, running class to 1,000. close to 1,000. Where is Raymond, the expert? There are some mines in Pioche, after all, that are not experiment, wildcat or black-mail.

AMADOR TUNNEL, -The face is now 320 feet from the mouth. As we stated in our last a station has been formed in the winze about 35 feet from the level of the tunnel, and a drift opened along the line of the ledge. It is in some little distance, and a very fine body of ore was struck last Friday. We think ere very long that the Amador will take its place as a bullion producing mine. bullion producing mine.

Bowery .- Mr. Blair, the Superintendent, is managing matters with the same careful attention that is his characteristic. The shaft is down 230 feet and still sinking. The new machinery works to a charm, The general appearance of

the mine is encouraging.

RED CLOUD.—Work on this mine, which is the next claim west from the Mazeppa, will be resumed next week.

A building has been put up, covering the A building has been put up, covering the incline, and other preparations made to carry on operations with system and economy. Mr. Dayton is also the Superintendent of this claim.

JOLLY TRAVELLER,-Still sinking the shaft. It is thought from the appear-ance of the country rock that the ledge is close at hand.

PIOCHE CHAMPION.-D. Watlett, the Superintendent of this mine, is still hav-ing the work of sinking the shaft pushed forward vigorously; no new developments of importance.

AN IMPORTANT STATEMENT -We call the attention of the public to an advertisement which appears in our columns, in which every mine owner in this region is directly interested. The following explanation of the matter has been afforded us by a prominent and reliable citizen: The present Recorder of the Meadow Valley District, who is our old fellow-townsman, John H. Ely, during his absence from the district, appointed Wm, H. Raymond as his deputy, who in turn placed the Records of the Meadow Valley Mining District in the hands of Joseph E. Patten, now a candidate of the Re publican party for the Assembly. Early in the present year Mr. Albert Barber was appointed as Deputy Recorder by Mr. J. H. Ely, who demanded and obtained from Mr. Patten the records referred to. About the 1st of May last, Patten requested of Mr. Barbert, Patten requested of Mr. Barber the keys of his sa'e, for the purpose of obtaining private papers of his, (Patten's,) and under this privilege he (Patten) abstracted the records of the district. He has since then and now holds the records, and not only refuses to deliver them to Mr. Barber, the proper custodian, but mine owners are deprived of the privi lege of obtaining copies of the records of their mines. When the demand which is made in another column, under the head of new advertisements, was made upon Mr. Patten personally, he replied in an insulting and abusive manner, that he would not deliver them up. Hence the publication of the aforesaid demand.

October. - The past month has been a prosperous one for Pioche, the evidences of which pleasant condition is to be seen on every side. New buildings, some of them quite elegant and substantial have risen as if by magic, and soon as finished are tenanted for either business purposes or as dwelling houses. Our communication with the railroad has also been increased to a daily line. the bus ness houses are fully occupied with the demands of their customers, while saloons, lodging houses, restau-rants and retailers in all lines are doing a thriving trade. The influx of strangers and new comers is increasing, and it is said will after the election meet with considerable additions. The con-struction of the Bullionville Railroed is proceeding with great rapidity and the hills encircling the town will soon he traversed by the locomotive. Altogeths er we can safely congratalateour citizens on the present s tisfactory condition and future prospects of Pioche.

CHALLENGE ACCEPTED,-James Sullivan writes, under date of Belmont, Oct. 28, that he will fight Arthur Dennis (who, through the Virginia Enterprise, offers to fight any 142-16 man in the State,) for from \$500 to \$1,000, provided Dennis will come to Belmont for that purpose. sullivan weighs 136 bs, and agrees to put up \$100 torfeit, if his terms are accepted. Address James Sullivan, Belmont, Nye county.

To TAXPATERS.-Treasurer Phillips has been for some time advertising the fact that State and county taxes for the year 1872 are now due and payable, and that the laws in regard to their collection will be strictly enforced. The time for settlement with the Collector is drawing to a close, and we would suggest to all that they make settlement at the earliest practicable moment. By so doing they will save costs and trouble

Firs.-Yesterday about noon the fire alarm bell gave forth its ominous warning. The boys were quickly out with their apparatus, but found no occasion for their services. The alarm was caused by a spark falling from a pipe or lighted match among the bedding in the lodging house beneath the Barnum Restaurant, on Meadow Valley street.

PERSONAL.-Mr. M. Tarpey, of San Francisco, brother of the well known and respected Secretary of the Meadow Valley arrived in town last evening. He will make a short stay in Ploche on some beginess matters. We hope he will enjoy his visit and receive a favorable impression of our lively town and valuable mines.

CLOSING SALOONS,-The attention of the proprietors of saloons is called to an advertisement in which the provisions of the law are published prohibiting the sale or giving away of intoxicating hiquors on the day of election.

FELL,-Yesterday a man named Wilson fell in a fit on Main street, near the State Bank. He was cared for by the by standers and soon recovered sufficiently to walk to his room. We believe Mr. Wilson is a resident of Bullionville.

LAGRUE'S RESTAURANT has changed hands, and will be re-opened on Tuesday morning as a first class restaurant. It is now closed for renovation and repairs.
